

ENVIRONMENTAL POLICY

PE.DI S.r.l. intends to establish and maintain an environmental management system that complies with UNI EN ISO 14001:15 which is summarised in this policy declaration and available to the public.

To this end it intends to develop a sound environmental awareness among all associates and a system of functional management aimed at maximum respect for the environment whilst respecting economic feasibility.

The environmental management system applied within PE.DI S.r.l. is being implemented through the following fundamental objectives:

- becoming a company that is aware of and attentive to the environmental problems linked to its sector of activity;
- establishing, as far as possible and in a manner consistent with the activities conducted by PEDl, a collaboration with suppliers and customers for the correct disposal of their waste products and for the reduction of environmental impacts affecting their region;
- always conforming with the applicable legislation and other requirements adopted by the environmental sector
- minimising the consumption of resources, ensuring the highest levels of energy efficiency possible;
- ensuring that all products, equipment and the various stages of the production process are safe for employees, customers and the surrounding environment;
- evaluating, in advance, the risks of environmental impact resulting from the production process and the products used in order to implement the measures necessary for the prevention and reduction of said impacts;
- analysing the environmental impacts of our products throughout the production chain (from the supply of the raw material to the end of the product's lifespan), in order to assess alternative solutions to ensure the lowest possible impact;
- ensuring that personnel are constantly made aware of environmental issues.

The Management, in order to ensure that the environmental management system is correctly implemented, confers to the Director of the Quality and Environment Group the right to suspend, at any time, any activity that does not conform to the established procedures or that compromises environmental safety.

In the belief that a sound environmental policy is an instrument for growth and continuous improvement, PE.DI S.r.l. undertakes to regularly check the eco-management system and to update the goals and objectives of the environmental sector in periodical management reviews.

In this respect PE.DI has the following objectives:

- Optimising the structures relating to fire prevention requirements;
- Optimising waste management, recycling as far as possible;
- Precise analyses of the various products' life cycles in order to reduce their environmental impacts throughout the whole production chain (Carbon Footprint);
- Minimising the quantities of stored and processed hazardous substances;
- Reducing the consumption of resources (electricity and gas).
